

Suggestion to improve the SUUNTO RACE

Capacity to save or move to the X point on the map

I was questioning myself what is the final interest to be able to draw a line to a X point when you move on the map on your watch

If it is just for getting the distance and « pseudo » direction (pseudo because give you an indication but not an angle) then the interest is limited

Now let's value it

If SUUNTO offers the possibility

either to SAVE the X point as a POI or to « move to » the X point

Then there is a huge interest, you scroll on the watch until you find the place you want to go and then you can save it and the watch will offer you a bearing navigation to it

WONDERFUL !!!!!!!

Capacity to « move to » or to « save » the X point

It will be awesome if there such option like

Save the X point

... or

Go to this X point

Then we can have a bearing navigation to this point
And it will be easy to reach it or at least to always know
Which is the distance and direction toward it

As SUUNTO represent it with a X
Everybody and in each langage it can be easy to catch
Move to X point will be « Aller au point X »
Or
Save the X point or « X point » will be « Point X »
In french
